TRADE IN your FOT TestManager and NDCS software: TRADE UP to Validata SAS, the first fully integrated ALM solution for the Banking and Finance sector

Change and Configuration Management software is seldom used to its full potential, often being applied intermittently or inconsistently across an organisation or even within a project.

One of the main reasons for this is that it doesn't sit within a formal structure for Application Lifecycle Management and therefore the overall governance process doesn't focus in on it.

At Validata Group, we recognise that Change and Configuration Management is fundamental in ensuring a successful project. Being able to track changes and apply standards from requirements, through the development phase and through to test and production are all critical in having full auditability. It also ensures that you deliver the solution the business always wanted.

For these organisations there is now a choice as Validata launches its Trade In Trade Up package, which allows businesses to upgrade their **FOT TestManager and NDCS software** to **Validata SAS** (License free), the complete end-to-end ALM solution for the Banking and Finance sector. In addition to the Change and Configuration Management function of the product, that you are replacing, you will also have full access to:

- Requirements Management
- Version Control
- Data Migration and Integration
- Build Management
- Release Management
- End-to-End Testing
- Executive Dashboard
- Reporting

If your **FOT TestManager and NDCS software** is not delivering the right results for you, then you need to contact Validata for your chance to trade up for free:
