TestCloud™

TestCloud™ changes the game and allows you to get to market faster, at lower costs and enhanced ROI.

The only true Pay-per-use model for Temenos T24™

Optimise IT spending and reduce hardware and license costs. Shift from capital expenses (CAPEX) to operating expenses (OPEX) model to free capital for more strategic investments.

• Pay per use model (monthly, quarterly, annually, etc)
• Effective dating of prices
• Test case-based pricing, Release-based pricing

Advantages and Benefits

• Consistent defined Quality for each Release
• Reduced defect leakage across the testing lifecycle
• Team optimization by utilizing shared services
• Predictable service delivery
• Business – IT aligned approach to testing
• Low risk commitment
• Effortlessly Scalable and Easy to Deploy
• Improved productivity and standardized processes
• Efficient reporting and metrics
• Reduced Total Cost of Ownership
• Up to 60% reduction in testing execution effort
• 40% reduction in knowledge transition effort

All organisations are under pressure to reduce costs and improve quality, whilst keeping pace with new technologies and practices. Software-as-a-Service (SaaS) and Cloud are emerging to become the predominant business models and creating disruption in the testing tools market. The traditional focus has been to test same specific activities (load, stress, functional, regression).
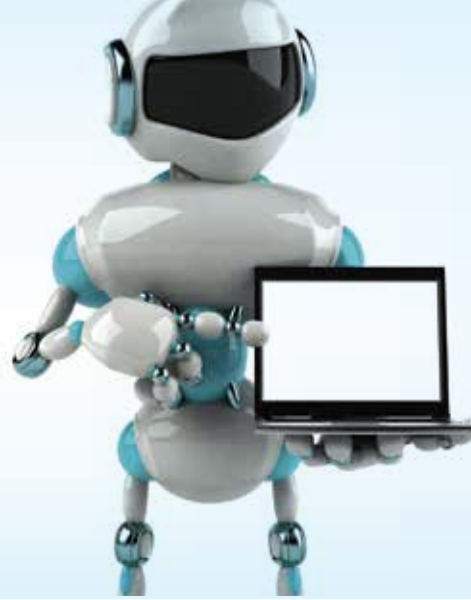

Economic conditions and pressure to improve time to market are placing increased emphasis on productivity and moving away from the shadow of shrink-wrapped software and towards the future of Cloud & SaaS models. With poor software quality leading to user dissatisfaction as well as increased development and maintenance costs, good quality assurance is an essential but costly process.

Therefore, having a well-defined testing software tool and practices to drive software quality will positively affect the overall bottom line of the business. Unlike traditional tools, **Validata SAS** validates Core Banking systems, aligns testing to business requirements whilst improving productivity and automation coverage, and achieves reduced test cycle times in all phases of testing. Service offerings and flexible pricing schemes are all part of the unique offering of **TestCloud™**.

TestCloud™ is a standardized Test 'Utility' solution with well-defined best practices, test automation, re-usable test assets and standards, robust defect and change management process and enhanced ROI.

Cloud-based Managed Testing Service delivered with Temenos Certified Partners

TestCloud™

The **end of testing** as we know it!

Pre-built Model Bank Testing Accelerators

Instant access to a library of pre-built reusable test cases and business workflows, which enable you to jumpstart your testing projects and substantially reduce the effort of testing. These test cases are the foundation for end-to-end automated testing of the complete Temenos T24™ stack from **Country Model Bank, to ISB and Local Code.**

Service Offerings

• End-to-end Manual and Automated **Testing-as-a-Service** (TaaS)
• **Planning & strategy** for T24 customization, implementation, maintenance & upgrade programs
• **Unit** Testing, **Early functional** Testing and **System Integration** testing
• **Support or completion** of User Acceptance Testing
• **Performance testing**, **Regression** Testing, **Parallel** Testing
• **Data Quality** Testing
• **Custom Reporting** via SLA's and defect management
• **Maintenance and archival** of the organisation's test environment
• **Skilled testing resources** with deep knowledge of Temenos T24™

Delivered with best-in-class partner channel

These partner relationships vary from the provision of specialist expertise through to joint solutions, with partners delivering the full consultancy and execution aspects of the engagement.
It is operated on the basis of pre-defined Service Level Agreements (SLAs). We have built advantages over the competition and we have combined existing technologies and knowledge to find new solutions and add further value to our existing.

Higher quality and productivity improvement

TestCloud™ is our solution to the industry's requirement of an enterprise level testing solution, **designed to deliver from single upgrades to multiple rollouts across different locations.**
It is a centralized testing group that serves specific, named software applications for a given customer. It helps in streamlining the testing processes and reduces the risk and uncertainty involved in ad-hoc testing. It allows us to deliver flexibility to the customer through value based pricing and flexible plan options such as Release-based or Test Case - based pricing.
